### FROM THE PRINCIPAL'S DESK

In recent times, several researchers have asked me as to how some tools can be applied in their main work. It appears as though the tool had been already selected and the foot has now to be cut to fit the shoes. This mushrooming of tools, in the name of all types of animal-kind, waiting to find buyers, was a phenomenon I once discussed with a professor in the National Conference on Power after such a presentation by him. It was regrettable, we agreed, that research has now become a simple application of newer and tools for solving a problem, probably in an outwardly different manner. The other technologies keeping pace with this trend appears to be that of Communication and Information Technology. This trilogy of collecting and/or communicating

information and applying a tool to solve the problem identified, sometimes leaves a big gap regarding the understanding of the system. I have observed glaring mistakes in the mathematical modelling of the system and practically nonsensical solutions that have hence emerged in some theses. Perhaps running to keep pace, armed with a basic understanding of the system, will enable us to have a constant scenery, in the ever-changing scenarios that technology now poses. I also recall a colleague asking me to give some application areas for Game Theory, an area in which I have repositated a lot of interest. Let me hasten to add that a system understanding is basic to applying Game Theory in its various interesting 'avatars'.

### "Brahmasmriti"
